

Use this instruction only when changing from A to C type iM.60 board!

The most important differences between A and C type iM.60 board are shown in the following pictures.

Connectors:

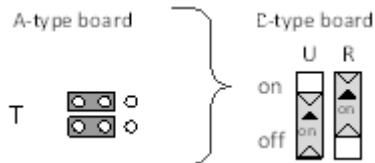

The C type board has an additional alarm led output. It's necessary to reconnect the wires.

Dipswitches:

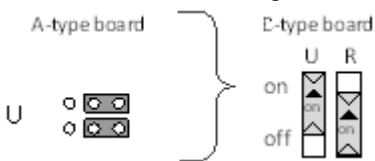

The C type board has 10 daps instead of 8. Functionality of dip 1 through 8 is still the same. Set dip 9 to ON and 10 to OFF !

Jumpers – sliding switches:

Temperature measurement setting:

Traditional terminal setting:

Adjusting:

Adjust the C type board according to the iM.60 brushless manual (35911713).
